ScrobbleFilter

Executive Summary

Many people use last.fm to scrobble the music tracks they listened to up to the Last.fm website. Many of these people also have Twitter accounts. Some of them also use the tweekly.fm service to post to their twitter account information about what they've been listening to recently. Tweekly.fm picks the top 3 artists you've scrobbled for the past week, and posts them to twitter on a weekly schedule.

Although my musical taste is varied, some of the same artists show up in the top 3 spots each week, despite the fact that the artists in spots 4 through 10 may vary quite a bit from week to week. Although I may have also listened to something unusual or interesting some particular week, that interesting info doesn't get posted to my twitter feed by the tweekly.fm service.

As a result my twitter feed looks somewhat repetitive.

ScrobbleFilter solves this problem. It does so by allowing you to create a list of artist to filter from your posts to Twitter. Based on the filter, the ScrobbleFilter app will compose a tweet for you about the top three artists from the remaining artists on your recently scrobbled list.
